

The power to activate the immune system with Engystol®

Strengthens the immune system in cases of viral infections

Susceptibility to infections depends upon the status of the immune system. The goal of a treatment with **Engystol** is to activate and support the defense mechanisms of the body.

Numerous studies have shown **Engystol**'s efficacy. For example, *in vitro* tests have demonstrated that **Engystol** stimulates the phagocytic activity of human granulocytes up to 33% above control cultures. Some research also reveals its antiviral activity while others evaluate **Engystol**'s prophylactic effect against the influenza.

Activate your immune system today...

Engystol is available in ampoule form as well as in tablets. Both medicinal forms exhibit excellent tolerability and efficacy. It is recommended for the entire family (including children, pregnant and nursing mothers) and is compatible with other medication.

The power to fight cold and flu with Gripp-Heel®

Alleviates cold and flu symptoms such as runny nose, sore throat, muscle aches, mild fever, etc.

The goal of a treatment with **Gripp-Heel** is to activate and support the defense mechanisms of the body, i.e., to strengthen the natural immune response when facing an infectious invasion. This results in milder symptoms and a shorter recovery time.

In vitro tests have demonstrated that **Gripp-Heel** stimulates the phagocytic activity of human granulocytes up to 30%. This effect was further enhanced to 41% when combining **Gripp-Heel** and **Engystol**. Studies confirm that **Gripp-Heel** is as effective as conventional treatments (antitussives, expectorants, analgesics and antibiotics) in the treatment of mild viral infections and acute upper respiratory infections. Further, the results show that compared to individuals treated with conventional medicine, patients treated with **Gripp-Heel** exhibited greater compliance and tolerability, demonstrated faster relief of symptoms and recovered more rapidly.

Ease through the cold and flu season with Gripp-Heel

Gripp-Heel is available in ampoule form as well as in tablets. Both medicinal forms exhibit excellent tolerability and efficacy. It is recommended for the entire family (including children, pregnant and nursing mothers) and is compatible with other medication.

Wobenzym N[®]

So much more
than digestive
enzymes!!!

Supports healthy blood flow and eases pain!

- For acute and chronic inflammatory conditions: muscular pain, injuries, rheumatic disorders and circulatory conditions
- Efficacy supported by numerous studies¹⁻⁸
- Mechanism of action:
 - Accelerates the breakdown of pro-inflammatory molecules
 - Restores permeability of the vascular membrane, resulting in a faster resorption of swelling
 - Improves blood flow and increases microcirculation
